

Configuring Aruba OS Switching Level 2, Rev. 17.41

Seminar-ID: COS2

Your key takeaways

This course teaches you how to implement and operate enterprise-level Aruba campus switching solutions. Hand-on labs give you experience with ArubaOS-Switches, including securing access, redundancy technologies such as Multiple Spanning Tree Protocol (MSTP), link aggregation techniques including Link Aggregation Protocol (LACP) and switch virtualization with HPE's Virtual Switching Framework (VSF). You will also learn to configure dynamic routing with Open Shortest Path First (OSPF) and Border Gateway Protocol (BGP), network optimization via Quality of Service (QoS), IP multicast routing leveraging Protocol Independent Multicast (PIM), and protecting the network using Access Control Lists (ACLs). This course is approximately 30% lecture and 70% hands on lab exercises.

After you successfully complete this course, expect to be able to:

- Implement spanning tree protocol and loop protections
- Ensure redundancy for a network's default gateway by configuring VRRP on Aruba switches
- Implement and manage an VSF fabric
- Deploy ArubaOS switches in single-area and multi-area OSPF systems
- Use Internet Group Management Protocol (IGMP) to optimize forwarding of multicasts within VLANs
- Implement PIM-DM to route multicast traffic
- Establish and monitor BGP sessions between your routers and ISP routers
- Define ACLs and identify the criteria by which ACLs select traffic
- Configure ACLs on ArubaOS switches to select given traffic

 Modecenterstraße 22/Office 4, 1030 Wien

- Implement 802.1X on ArubaOS switch ports
- Configure captive portal authentication on ArubaOS switches to integrate them with an Aruba ClearPass solution
- Configure tunneled-node on ArubaOS switches
- Configure ArubaOS switches to select traffic, apply the appropriate QoS marking, and place the traffic in the proper priority queues
- Implement DHCP snooping and ARP protection to defend networks against DHCP exploits, ARP snooping, and ARP poisoning attacks
- Implement the proper port security measures for various use cases
- Implement connection rate filtering to provide a first layer of protection against viruses and worms

Target Groups

Ideal candidate for this course:

Typical candidates for this course are IT Professionals who will deploy and manage networks based on HPE's ArubaOS-Switches.

Prior knowledge

The following knowledge is recommended for this seminar:

Configuring Aruba OS Switching Level 1

Dates & Options

Date	Duration	City	Offer	Price
12.09.2022-16.09.2022	5 days	Wien	Classroom Training	€3.250,-
12.09.2022-16.09.2022	5 days	Wien	Online Training	€3.250,-
16.01.2023-20.01.2023	5 days	Wien	Classroom Training	€3.250,-
24.04.2023-28.04.2023	5 days	Wien	Classroom Training	€3.250,-
24.04.2023-28.04.2023	5 days	Wien	Online Training	€3.250,-
31.07.2023-04.08.2023	5 days	Wien	Classroom Training	€3.250,-
11.09.2023-15.09.2023	5 days	Wien	Classroom Training	€3.250,-
11.09.2023-15.09.2023	5 days	Wien	Online Training	€3.250,-
